autocad can't find autocad I am new to Xpcece. Im trying to open a bunch of documents from our binder at a time. But there are some that i can't open. I am trying to open these documents from a shared folder on the main C drive. The shared folder is mapped to a network drive, and im trying to open the documents from the network drive. The network drive is shared for read/write access from all users on the network. The documents are from our customer's CAD files. I would like to open the documents i can't find autocad on my computer. How do i go about this? I have already tried to run autocad.exe and press ctrl alt delete. Here are the result. >C:\>autocad.exe -dofype c:\cadpath="[homeshare]\w2k3\cad\cadpath\test2.cad" Microsoft Windows [Version 6.0.6000] (c) 2006 Microsoft Corporation. All rights reserved. C:\>>autocad.exe -dofype c:\cadpath="[homeshare]\w2k3\cad\cadpath\test2.cad" If you need to execute the -dofype command line parameter first, then you will need to ensure the file is an Autocad file that you can open in Autocad. The easiest way to do this would be to simply download and run Autocad 2010 Express or Autocad 2012 Architectural Designer. You can then select the 'Open' option from the File menu and choose to open a CAD file. And thanks for the replies so far. Is there a way i can do this in Autoe 82157476af
